

Central Wimberley Wastewater Project - Status Update

August 5, 2021

Prepared By: Craig Fore

Construction

Lift Station (RR12 @ FM 3237)

The lift station is up and running and customers are beginning to hook up to the system. We are working through some issues with the pumps not priming every time. A solution has been figured out and we have parts on the way to remedy the problem. In the meantime, PGMS, our monitoring company is operating the lift station daily by hand until the problem is corrected.

Hook Ups

Coordination

We are continuing to meet with sewer customers and work with them to get their connections done in a timely manner.

Communication

Property/Business Owners

Letters have gone out to all property owners notifying them that construction is complete and hook ups are expected by September 15, 2021.
